

Con Corazón Outreach Report

28 May 2021 – Marampaqui

Our team is getting more cohesive. We could tell that they communicate and engaged in the duties smoothly. In this opportunity, due to road maintenance, we have had a heavy traffic on the way to Marampaqui and it was worse on the way back Home, because of multiple car accidents.

Activities

- In the medical area with Dr. Davis, we have seen 7 patients, may with urinary problems and some with joint disorders.
- In the dental area with Dr. Flor, we have seen 5 patients. Tooth necrosis and caries were recurrent.
- In the laboratory with Biologist Wendy, we have seen 4 patients.
- In the nursing and triage area with Ana and Yoni, we have received all the patients temperature taken, weighed and height measured.

Porfirio Huillca and his wife Benita, have met each other in a weeding party. They live together for 15 years. Both of them came up to our health center to see the doctor. She has problems with her liver and he has urinary problems. We have taken some blood samples to find out what is going on. Benita says: "what would we do if we didn't have a health center here.

This is Yoni Huillca 27 years old. She has two children Ana and Marta. They live right near our health center. Yoni is in charge of cleaning, triage, nurse assistant and translator. Through training and experience gained over the last few years, she learned all the basics regarding how to care for a sick patient in her village. She also helps us translating from Spanish to Quechua, a native Peruvian language.
