

## Con Corazón Outreach Report

27 August 2021 – Marampaqui

Once again, the patients were waiting for us as we arrived to our health facility at 9:00h.

As soon as they recognized us, we could feel the excitement of our patients.

This time we were able to see many patients and unfortunately, we turned some of them away. Although with this group of people we made a deal: in order to come next outreach for a treatment, they have to fix the greenhouse nearby and in return they get a ticket. Therefore, on the next visit, they will not need to queue.

### Activities

For medicine, we have seen 24 patients with different needs.

For dentistry we have seen 16 patients.

For the laboratory we have seen 9 patients

## Photo Gallery

Fani (14 years old), Evelyn (12 years old) and Kati (14 years old) come to get their teeth fixed. They say that because of toothache makes it difficult to pay attention at school. Since there is not internet signal in the area, these girls have to walk to a higher spot to get signal and receive school either via internet or a phone call.

Reina (10 years old) and Elizabeth (16 years old) are sisters. They have to walk 3 hours to get to our health center. Reina has stomach ache and Elizabeth has left foot ache. The doctor has told Elizabeth that she must rest her feet. The interesting part is that they need to get back home and must walk another 3 hours.

Our nurse in action (left). Some patients receive medications intravenously and others medications intramuscularly. Our dentist in action (right) filling cavities with composite and completing the work with a halogen lamp.

The patients who were turned away, clean and prepare the soil for planting new vegetables. They get a ticket for our next outreach, so they do not have to queue but enter straight to the triage system.

By next time we are planning planting onions, more cabbages, aromatic herbs for tea and others that should be chosen and picked by the beneficiaries.
