

Con Corazón Outreach Report

27 September 2021 – Marampaqui

On this occasion, Covid-19 did not allow our biologist Wendy Lucana to be with us. The laboratory did not work this time. She has been feeling very ill for almost a week. Hopefully she gets better soon.

Jhoni Huillca is also ill. In this case, we do not know if it is due to Covid-19 or not. She did not have a Covid-test because there is no way to do it where she lives. Her sister Nelly replaced her and did a great job translating and cleaning.

Activities

Dr. Davis Carrión was able to see 14 patients. Due to the cold and some early rains, patients are presenting pictures of flu and respiratory diseases.

In dentistry, Dr. Flor Salvador and her dental assistant Flor Rios have seen 14 patients. Most came for dental extractions.

Photo Gallery

Every time we want to announce that we come to Marampaqui for medical and dental care, we do it through the Local radio, Radio Ausangate. They broadcast the announcements days in advance and people get ready to go to our health center.

The Sumaq Wasi (pretty house) project, sponsored by the government, is taking place. You can see the contrast between the old house and the new one. In the area of Marampaqui Alto there are 25 houses that have been implemented. They expect to finish it the midst of October.

Health promotion and prevention, it is an important pillar in our organization. Our focus is to keep people healthy. We aim to engage and empower individual and communities to choose healthy behaviors. This might result in the reduction of chronic diseases and other morbidities.

The guinea pig project is running smoothly. Benjamin Mamani has received a monetary loan from Con Corazón and that helps him buy guinea pigs. The most challenging part is finding a good male guinea pig that is also expensive. He already bought it!

He also has a shed for the small animals and also a field where he plans to have grass to feed the guinea pigs. We are very happy to support those who are fighting for their dreams.

We had an emergency, a man fell and dislocated his hip. His name is Julian Merma and he is 50 years old. He was in a lot of pain and his brother had to walk to our health center to ask for help. Immediately, Dr. Davis took some medications and had to walk 30 minutes to get to Julian's house. There is no way to get there. We had to reposition his hip and then give him pain relievers and anti-inflammatory intramuscularly. He is following up with our nurse Ana Rivera. Julian is very grateful.
