

Con Corazón Outreach Report

7th December 2021 – Marampaqui

December 5, Sunday night, our physician Dr. Iris Chalco called us to say that she got positive to Covid-19 during a molecular test. She has some symptoms and that led us to decide hiring another physician. We only had one day to find another doctor. Finally, Dr. Gustavo Gutierrez answered the phone and we found out he was available so he came along with us.

Activities

It was a rainy day and we expected to see only few patients but we were wrong. There were so many patients, more than any other outreach.

- Dr. Gustavo saw 34 patients, many of them with moderate respiratory problems. Interestingly, many women with vaginal infections.
- Dr. Flor, saw 14 patients. Many fillings and extractions.
- Wendy made 12 laboratory exams, most of them for urine test.
- Nurse Sayda was busy with many intramuscular injections the Dr. had given to her.
- Pharmacy was full too. Jhoni managed to explain the patients in their native language, all the instructions given by both doctors.

The rain didn't stop our patients to come to our health facility. In this season, many respiratory problems are affecting the people from the area.

Maria Mamani, came along with her baby Nicolas. He has been coughing for couple of days. She said "I heard that in Con Corazon the doctors are good and nice persons. That is why I brought my son with me and he will get healed."

Nelly Quispe is waiting for the opportunity to teach the kids in Marampaqui. We talked to the school teacher and she needs help especially with homework that the children must do but unfortunately, they do not do it. We would love to partner with her.

The trout farming pools are ready to receive 5000 baby trout! (Alevins)

1. Alevins 2. Medium-sized overgrown trout. 3. Large trout, ready to be sold in the market.

We are happy to support Porfirio Huilca with this endeavor through Con Corazon Microcredits.
