

Con Corazón Outreach Report

12th October 2022 – Marampaqui

During the afternoons of Thursday, Friday and Saturday of each week, the children come to our Medical Center to receive reinforcement classes, help with homework, improvement of writing and reading aloud. In a little conversation with them, we were able to learn the following:

- They have lunch at school. According to the testimony of most of these children, they bring fruit (apple, tangerine) as a snack. They also carry rice and potatoes and sometimes noodles.
- At 15:00 hours, at the end of school, they go to our Medical Center, where teacher Nelly Quispe prepares some eggs and rice, so they can endure hunger during the scheduled activities.

Nutrition is a fundamental element for the development of learning. This helps them to concentrate more on the activities organized by the teacher and meet basic objectives. For that reason, we help children to always have something to eat in our Medical Center.

Activities

- General Medicine, 25 patients were seen.
- Dentist, 13 patients.
- Laboratory, 09 lab exams were performed.

Drawings and signs made by the students in our Medical Center. These are some of the results of the activities carried out by Professor Nelly.

Our power generator. Once again the periodic inspection of this was made. Works perfectly.
