

Con Corazón Outreach Report

27th October 2022 – Marampaqui

The principal Rosmery Bellido and teacher Eufemia Quispe, from the primary school of Marampaqui, came to visit us. They are very satisfied with the work that Nelly Quispe has been doing, teaching the children to improve their reading and writing techniques and the daily tasks that children must do. They also report that their reading comprehension and basic science knowledge have improved. At this stage, more books and other resources are needed that the teachers need to continue to scale with the project.

The joy and enthusiasm of the students is noticeable when they share their experiences with Professor Nelly in our Medical Center. We asked the children a couple of questions _ What is the cell? _ Suddenly everyone raised their hands at the same time. The answer was quick “The cell is the structural, functional and genetic unit of living beings”, their pride was evident for having said it out loud.

Activities

- General Medicine, 27 patients were seen.
- Dentist, 20 patients were seen by two dentists
- Laboratory, 07 lab exams were performed.

Treating more patients is always ideal. A volunteer dentist Dr. Ujval Gummi from California, USA came to serve to our patients in Marampaqui and Cusco. In the meanwhile, Dr. Eliana Carrillo was doing dental cleanings with our ultrasound.

Arriving at our Medical Center it is always good to see our patients in the waiting room. Some of them were waiting as early as 06:00 am.
