

Con Corazón Outreach Report

26th April 2023 – Marampaqui

Supervising the implementation of the SMS is an important part for the success of the project. Each beneficiary has installed the SMS in the way that best suits them, respecting the technical part. For example, some have put mud around the stove, others have not. Each beneficiary has chosen the best place to locate the SMS.

Again, the challenges emerge at this stage. For three beneficiaries it is not easy to change the habit of cooking with their open stoves and they still preserve it. They say "just in case". One person has not yet installed her SMS due to "lack of time and heavy rains". It is there where we must continue to sensitize people and encourage them to change the habit.

We knew that this process was not that easy and we were prepared for this. We will continue with home visits to ensure that the project is a success.

Activities

Medicine, we have seen 25 patients.

Dentist, 12 patients

Laboratory, 09 lab tests were done.

Health promotion for all our patients.

Photo Gallery

These users adopted the use of SMS very quickly. They feel more comfortable and they even bought new pots to cook with.

Some users have covered their SMS with mud. Others prefer to show the complete metal stove.

Small challenges: Some users still keep the open fire stove next to the SMS. Others have been slow to install SMS.
