

Con Corazón Outreach Report

03rd October 2023 – Marampaqui

The people who live in the area, unfortunately do not have access to quality education, therefore, they have not learned nor do they have information about the deleterious effects caused by the daily habits that they themselves practice. For example, they do not wear helmets when driving their motorcycles, they do not wash their hands frequently, they inhale smoke from open fire kitchens, etc.

Our commitment is to teach and raise awareness through informative talks, especially in the area of general health. On this occasion we emphasize the respiratory system and the factors that cause its progressive destruction. We also talk to them about the potential diseases that they could suffer in addition to the consequences in the social and economic area that these may generate.

All of these diseases are possible to prevent and this can be achieved through health promotion and prevention.

Activities

Medicine, we have seen 26 patients.

Dentist, 12 patients

Laboratory, 08 lab tests were done.

Health promotion for all our patients.

Photo Gallery

Our laboratory in Marampaqui always ready for any lab test required by the doctor.

A patient with an ear infection seen by a doctor and a nurse. Dalia couldn't sleep for a few days because of pain in her ears.
