

Con Corazón Outreach Report

20th October 2023 – Marampaqui

At our Marampaqui Medical Center we have a laboratory which is run by Biologist Wendy Lucana. There we receive patients who are sent by Dr. Ingrith to do their respective analyses. From urine tests to blood tests, they allow us to identify the real problem of each patient. In this way, the quality of treatment that the beneficiary receives is guaranteed thanks to these processes.

Little Artemio came for a blood test due to a severe stomach infection. He went to a health center of the Peru Ministry of Health, where they prescribed medicines that did not correspond to his treatment. There is a laboratory there but they did not use it for the purpose of the child's illness. Since Artemio's condition did not improve, he had to go to our Medical Center where he received smiling and kind faces before pricking the needle into his finger.

Activities

Medicine, we have seen 25 patients.

Dentist, 12 patients

Laboratory, 10 lab tests were done.

Health promotion for all our patients.
