

Con Corazón Outreach Report

17th November 2023 – Marampaqui

We can now take dental x-rays on our patients! Con Corazón manages different projects and one of them is the dental project. Thanks to the company Ivoclar we have a portable radiographic device. This system also includes a sensor and a laptop that we use to view the images produced. We use this system specifically for the mobile dental clinics we carry out in Marampaqui and Huaró.

The oral health conditions of our patients include numerous diseases. It is very difficult to explain to them that a simple dental restoration will not be able to save their teeth. In these cases, more complex procedures are needed to save the tooth. This portable radiographic system helps us explain their real condition and possible treatment alternatives. The diagnostic information provided, guides us to carry out correct planning and subsequently the best treatment alternative for the problematic tooth.

Activities

Medicine, we have seen 24 patients.

Dentist, 10 patients

Laboratory, 9 lab tests were done.

Health promotion for all our patients.

Photo Gallery

Eleuterio has suffered a fracture in his tibia. He is on the road to recovery and comes to visit our doctor.

Lately there have been a number of patients coming with ear infection. Doctor and nurse taking care of it.
