

Con Corazón Outreach Report

26th January 2024 – Marampaqui

Greta arrived at our Medical Center, after having walked three hours to seek help for her pain in her hands, knees and feet. It was incredible to know that she managed to walk for so long and alone. She has been suffering from these pains for many years due to arthritis that she suffers from. She has tried many ways to stop her illness, from ancient medicine through rubs with medicinal herbs to Western medicine through pills and ointments. Unfortunately, the Ministry of Health no longer wants to give her more medicine because her illness is incurable.

It is for this reason that she comes to us and we explain to her that her illness is indeed incurable, but we can help her mitigate the pain through pain creams along with the pills that she needs to alleviate her suffering. She tells us, "I haven't had these medicines that calm my pain for many months, thank you, thank you!!" she tells us repetitively.

Activities

Medicine, we have seen 25 patients.

Dentist, 13 patients

Laboratory, 10 lab tests were done.

Health promotion for all our patients.

Photo Gallery

Nebulizing a child because his lungs are partially obstructed.

Dr. Ingriht giving instruction to a patient with arthritis and delivering her medicine.
