

Con Corazón Outreach Report

28th February 2024 – Marampaqui

Oral health conditions in our region are very serious. Children consume abundant sugars and carbohydrates. This is a problem that we face constantly and makes our activities a challenging task. In the photo below, at this stage of the disease, the teeth are necrotic and fragmented, also surrounded by infection in the surrounding tissues such as bone and gums. The solution: extract the teeth. Many children prefer not to have their teeth extracted and live like this until they change their teeth.

This condition results in poor chewing quality, coexistence with infection, which affects their general health. We combat this by promoting oral health and developing treatments by our dentists. Taking the route of extracting teeth is always a difficult decision for children, parents and the dentist.

Activities

Medicine, we have seen 25 patients.

Dentist, 13 patients

Laboratory, 10 lab tests were done.

Health promotion for all our patients.

Photo Gallery

Delivery of oral hygiene kits to children, accompanied by specific instructions

Helping Jorge with a skin problem from a few months ago.
